

Dental-Child Interaction Training

Promoting Positive Interactions with Young Dental Patients

Calling all dental offices and dental providers for a **one-day training workshop on Friday, April 25!**

Dental-Child Interaction Training (DCIT) is a collaborative project funded by NIH and the National Institute of Dental and Craniofacial Research. Providers will learn child behavior management skills to enhance quality care for young patients.

Training workshop will include:

- 8 free CEU credits!
- Specialized skill-building for effectively working with young children
- Watching film segments featuring expert dental providers
- Interactive exercises to practice skills with direct feedback
- Breakfast, lunch, and refreshments!
